RADIO AMATEUR CALL BOOK

MAGAZINE

From time to time we have added special features to the CALLBOOK such as Great Circle Maps, Great Circle Bearing Tables, Time Conversion Chart, Postal Information and a Distance Table.

We would like to hear from the users of the CALLBOOK giving us suggestions for additional material of this kind.

B&W ALL BAND

From air-wound inductors to variable condensers and matched condenser-coil combinations, B&W has been a step ahead in the development of many types of equipment for the amateur. Faraday Shielded Links, now manufactured by B&W to fit their standard coil series, aid in the reduction of TVI.

For the amateur who wants to build his own all-band transmitter, the B&W Frequency Multiplier solves the problem of developing and constructing the proper frequency step-up stages.

Write today for complete data on equipment designed for the Amateur to Dept. RA-30.

TWIN-LEAD TRANSMISSION LINES

Choice of the serviceman and amateur for receiving and transmitting antennas and transmission lines, Amphenol Twin-Lead is the ideal means of transmitting signals with minimum losses. Durable polyethylene dielectric resists weather, acids, alkalies, and oils. Remains flexible at — 70°C. For standard ons. Remains nexible at = 70 C. For standard FM and TV receiver installations use Receiving Twin-Lead — No. 14-271 for deluxe installations.

COAXIAL CABLES

Amphenol Coaxial "RG" cables are produced to standards that surpass Army-Navy specifications. They are ideal for a myriad of electronic application. Outer jackets are of tough, resistant vinyl, nontrome application. Outer jackets are of tough, resistant vinyl, non-hygroscopic and impervious to acids, alkalies, oils and gasoline. Charts showing characteristics and dimensions are available upon request.

RF CONNECTORS

Amphenol manufactures many thousands of items for radio, electronic and electrical uses. The line includes radio sockets and connectors, "AN" connectors for power and control circuits, Radio Frequency cables and connectors, Tube Sockets for all types of industrial applications, plastics for electronic usage.

Catalogs of Amphenol products will be mailed upon request. To keep up-to-date on electronic and electrical developments, be sure your name is on the mailing list to receive our monthly magazine, The Amphenol Engineering News.

CHART OF THE WORLD

Showing Great Circle Distances and Azimuths from San Francisco, Cal. to all Points on the Earth's Surface

To find the great circle bearing of any point in the world from San Francisco draw a straight line from the center and note the reading in degrees as indicated on the outer scale. The bar scale may be used to determine the approximate distance. This map was prepared by the Hydrographic Office of the U. S. Navy Department.

Great Circle Chart of the World Centered on THE UNITED STATES

To find the great circle bearing to any point in the world from the center of the United States, draw a straight line from the star and note the reading in degrees on the outer scale. The bar scale at the bottom of the chart can be used to determine the distance in statute miles. For bearings to the nearest degree reference is invited to the table on the opposite page. The outlines of this chart were prepared by the U.S. Coast and Geodetic Survey.

GREAT CIRCLE BEARINGS

FROM THE CENTER OF THE

UNITED STATES

The table below shows the great circle bearing in degrees from the exact center of the United States to countries throughout the world having licensed radio amateurs. Where cities are shown the bearing to the nearest degree is given. These bearings were compiled from information supplied by the U. S. Coast and Geodetic Survey.

The above table shows the great circle bearing in degrees, of various metropolitan areas in the United States in relationship to large cities throughout the world. This table should be used from left to right only. To find the great circle bearing between any two of the cities shown, start at the left and follow the hori-ontal line to the right until you come to the column directly under the name of the city that you desire

to beam a radio signal to. For all practica, purposes in the United States, Polaris (the North Star), is due north. To find this star, to calibrate a directional radio beam, look for the first star on a straight line with the two outer stars on the outside edge of the cup of the big dipper. This table was compiled from information furnished by the U. S. Coast and Geodetic Survey. Copyright 1947, Radio Amateur Call Book, Inc.
